

Recovery is possible. MOUD can help.

Medications for opioid use disorder (MOUD) like methadone and buprenorphine help:

- normalize brain chemistry
- relieve cravings
- prevent withdrawal symptoms
- lower the risk of an overdose by 50%

Along with support from friends, family, and treatment professionals, MOUD help people recover safely.

Recovery is a community of people who have been where you are and will be there for you.
